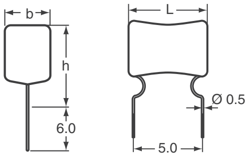
NEW! Metallized Polyester Film Capacitors — Mini-Blue Series MKT — In Heat-Shrinkable Tube



The EPCOS Mini-Blue Capacitor series can be used in a multitude of general purpose applications such as DSL, Energy Saving Lamps, Compact Fluorescent Lamps, Consumer Electronics and Alarm Systems (including motion sensors and break in/smoke/fire alarms). An advantage of the EPCOS Mini-Blue Capacitors is the small size where board space is limited, taking up considerably less board space than a boxed capacitor with the same voltage/capacitance ratings. The Mini-Blue's unique stacked construction give it the ability to withstand high pulse strength (High DV/DT) **Construction:** • Dielectric: Polyethylene terephthalate (polyester) • Stacked-film technology • 5mm lead spacing • Heat shrinkable tube: polyester (100µm, 125°C) **Terminals:** • Parallel wire leads - tinned **Features:** • Very small dimensions • Self-healing properties • High pulse strength **Specifications:** • Operating temperature range: -55°C to 125°C • Climatic category: 55/125/56

Medium Power Film Capacitors

The FFB and FFV3 series use a non-impregnated metallized polypropylene or polyester dielectric with the controlled self-healing process, specially treated to have a very high dielectric strength in operating conditions up to 105°C. They have been designed for printed circuit board mounting. Furthermore, their performance allows them to be an alternative to electrolytic technology because they can withstand much higher levels of surge voltage. One unique feature of this technology (as opposed to electrolytics) is how the capacitor reacts at the end of its lifetime. With an electrolytic, there is a strong risk of explosion of the case. However, with this line of film capacitors, the capacitor will simply experience a loss of capacitance of about 2% at the end of its life. This loss of capacitance is theoretical because the capacitor continues to be functional even after this 2% decrease.

Applications: The FFB and FFV3 series are particularity designed for DC filtering, low reactive power.

General Characteristics: • Climactic Category: 40/105/56 IEC 68 (FFV3 Series) 55/105/56 IEC 68 (FFB) • Test Voltage between terminals at 25°C is 1.5 X Vndc

KEMET CHARGED.

Ceramic Conformally Coated Axial Leaded Capacitors **"AXIMAX"**

The "Aximax" series of multi-layer ceramic capacitors starts with a capacitor element that consists of formulated dielectric materials which have been cast into thin layers, interspersed with metal electrodes alternately exposed on opposite edges of the laminated structure. The entire structure is fired at high temperature to produce a monolithic block, which provides high capacitance values in a small physical volume. After firing, conductive terminations are applied to opposite ends of the chip to make contact with the exposed electrodes.

KEMET leaded ceramic capacitors are offered in the three most popular temperature characteristics: **C0G:** Class 1, with a temperature coefficient of 0 ± 30ppm per degree C over an operating temperature range of -55°C ~ 125°C (Also known as "NP0"). **X7R:** Class II, with a maximum capacitance change of ±15% over an operating temperature range of -55°C ~ 125°C. **Z5U:** Class III, with a maximum capacitance change of 22% - 56% over an operating temperature range of 10°C ~ 85°C. **RoHS Compliant Parts Available**

Ceramic Conformally Coated Radial Leaded Capacitors “GOLDEN MAX”

The “Golden Max” series of multi-layer ceramic capacitors starts with a capacitor element that consists of formulated dielectric materials which have been cast into thin layers, and interspersed with metal electrodes alternately exposed on opposite edges of the laminated structure. The entire structure is fired at high temperature to produce a monolithic block, which provides high capacitance values in a small physical volume. After firing, conductive terminations are applied to opposite ends of the chip to make contact with the exposed electrodes.

KEMET leaded ceramic capacitors are offered in the three most popular temperature characteristics: **C0G:** Class 1, with a temperature coefficient of 0 ± 30ppm per degree C over an operating temperature range of -55°C ~ 125°C (Also known as “NP0”). **X7R:** Class II, with a maximum capacitance change of ±15% over an operating temperature range of -55°C ~ 125°C. **Z5U:** Class III, with a maximum capacitance change of 22% - 56% over an operating temperature range of 10°C ~ 85°C. **RoHS Compliant Parts Available.**

AVX TPC *NEW!* Radial Leaded Ceramic Disc Capacitors

Class 1 Dielectric Features: These ceramic capacitors have a linear temperature coefficient, very low tolerances, low losses, high insulation resistance, and are specially suited for tuned circuits, timing and other precision circuits. **Specifications:** • Insulation Resistance: ≥10GΩ • Operating Temperature Range: -30°C ~ 85°C

SL Dielectric Features: These capacitors have wide temperature characteristics but still offer low loss and linear type temperature coefficients. They are specially designed to be a smaller alternative to standard Class 1 capacitors of linear temperature coefficient. Typical application is RF tuning. **Specifications:** • Operating Temperature: -30°C ~ 85°C

Class 2 Dielectric Features: These ceramic capacitors have a high dielectric constant, which makes possible high capacitance values in reduced dimensions. However, temperature coefficient and loss factor are greater than Class 1. Typical applications include decoupling and bypass. **Specifications:** • Insulation Resistance: ≥10GΩ • Operating Temperature Range: -30°C ~ 85°C

Class 3 Dielectric Features: A thin dielectric layer is grown on a disc of conductive ceramic. Very large capacitances can be obtained due to reduced thickness of this barrier layer and its inherently high dielectric constant. Due to its small dimensions, they are a less expensive replacement of multilayer ceramic or polyester capacitors. **Specifications:** • Operating Temperature Range: -30°C ~ 85°C

NEW! Epoxy Coated AC and Switch Mode Ceramic Disc Capacitors

These capacitors are made of a new dielectric compound specially developed for AC or switch mode circuits that can generate dielectric heat, which is the limiting factor on other ceramic disc capacitors.

This series adds the advantages of Class 1 capacitors (low loss factor) with the advantages of Class 2 capacitors (small size and lower cost). These capacitors are epoxy coated, flame retardant class UL94V-0. They meet the standards of the telecom and data processing industry. They are particularly suited for TV deflection and power supply circuits.

Specifications: • Insulation Resistance @ 500V: ≥10GΩ • Operating Temperature: -40°C ~ 125°C

Applications where the capacitor failure does not lead to the danger of electrical shock. There are 3 subclasses related to the peak voltage of the impulses superimposed to the main voltage; Subclass X1: Impulses up to 4kV; Subclass X2: impulses up to 2.5kV.

Y Function:
Applications where the capacitor failure may lead to the danger of electrical shock. There are 4 subclasses related to the peak voltage of the impulses applied before life test. Subclass Y1: Impulses up to 8kV; Subclass Y2: Impulses up to 5kV; Subclass Y3: Rated for 250VAC without impulses.

SV Series

High Voltage Leaded Ceramic Capacitors

High value, low leakage, and small size are difficult parameters to obtain in capacitors for high voltage systems. AVX's SV series lead capacitors meet these performance characteristics. These special design criteria result in significant reduction of partial discharge activity within the dielectric and having, therefore, a major impact on long-term reliability of the product. The SV high voltage radial capacitors are conformally coated with high insulation resistance, high dielectric strength epoxy eliminating the possibility of arc flashover. This series also exhibits low ESR at high frequencies. The same criteria governing the high voltage design carries the added benefits of extremely low ESR in relatively low capacitance and small packages. These caps are designed and are ideally suited for applications such as snubbers in high frequency power converters, resonators in SMPS, and high voltage coupling/DC blocking.

Specifications: • Operating Temperature: -55°C ~ 125°C • Insulation Resistance: (25°C, at 500V) 100K MΩ min., or 1000 MΩ-µF min., whichever is less • Dissipation Factor: **C0G:** 0.15% max., **X7R:** 2.5% max.

High Capacitance Multilayer Ceramic Chip (MLCC) Capacitors

Now available in capacitance values of 1 µF (in 0402) up to 100 µF (in 1210)

More Options are Available when Choosing Capacitors

Advances in ceramic technology have now increased your choices when selecting the best capacitor for your application. No longer are you restricted to Aluminum Electrolytic, Tantalum or Chip Film Capacitors. High capacitance MLCC capacitors from Panasonic now offer higher capacitance and better performance. The superior reliability, ESR and impedance of MLCCs can now be found in higher capacitance values.

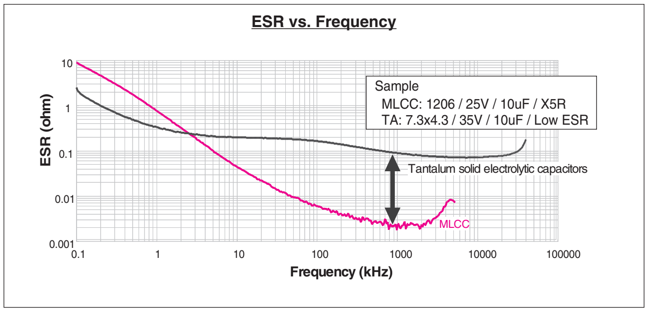
Product Design Benefits

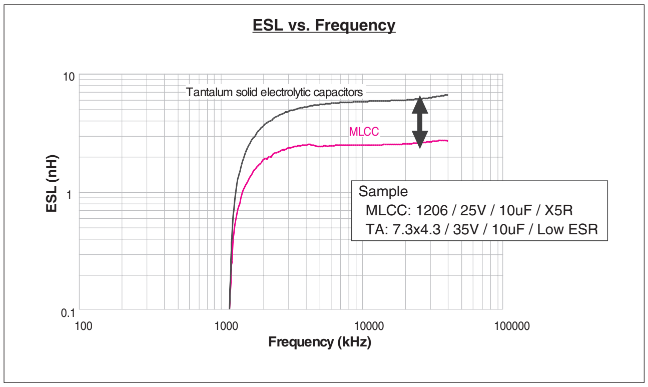
Several technology improvements have made it possible for Panasonic to put more capacitance (1µF and greater) into smaller case sizes (1210 down to 0402) while maintaining the largest possible operating voltage (6.3V up to 50V). These mechanical and electrical characteristics will enable you to make products having smaller size, less weight, increased performance and at a lower cost, thereby making your products more competitive.

Electrical Performance Advantages of MLCCs

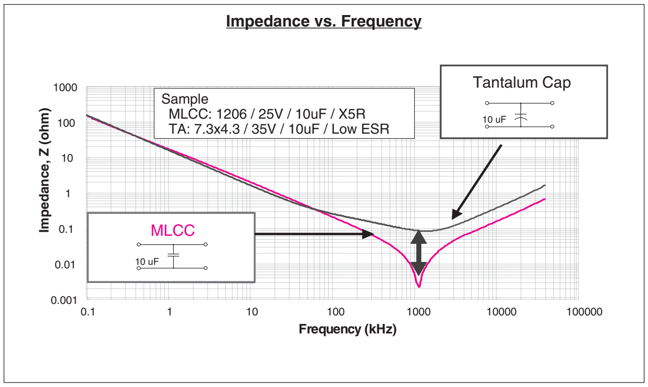
The lower Impedance and Equivalent Series Resistance (ESR) of MLCC Capacitors vs. Tantalum Capacitors, especially at the higher frequencies in the 100kHz to 1MHz range, provides a performance advantage for your decoupling needs.

Lower Equivalent Series Resistance (ESR)





Lower Impedance (Z)



Engineering Kit of High Capacitance Multilayer Ceramic Chip (MLCC) Capacitors is available.

PCC18B-KIT-ND..**$49.95**

Microwave (Hi-Q) Multilayer Ceramic Chip Capacitors

Now Available in Case Sizes of 0402 (0.1 ~ 15 pF) and 0201 (0.1 ~ 3 pF)

Features and Major Characteristics:

- High-Q values compared to standard MLCCs, due to their unique materials that includes silver inner-electrodes (refer to the graphs)
- Small Case Sizes: 0201 (0.6 x 0.3 mm) and 0402 (1.0 x 0.5 mm) Wide Range of Capacitance Values (0.1 to 15 pF, in 0.1 increments)
- Tight Capacitance Tolerances (as low as + / - 0.05 pF for 0.5 pF and lower)
- Very Stable C0G Temperature Characteristics (0 + / - 30 ppm / °C) 25V Rated Operating Voltage
- Lead (Pb) Free Part Numbers: ECD-G0Exxxx (0402) and ECD-GZExxxx (0201) (Dielectric Materials, Electrodes, and Terminations)

Benefits:

Excellent electrical performance in RF and Microwave circuitry such as Impedance Matching, Resonant Circuits and Coupling.

Typical Applications:

Their small sizes are especially suited for RF and Microwave Circuitry contained within: RF Front-end Modules, Power Amplifier (PA) Modules, Duplexers, Voltage Controlled Oscillators (VCOs), Filter Circuitry (such as Band-Pass Filters), Impedance Matching Circuitry, Resonant Circuitry, Coupling and Bluetooth, Wireless LAN and Modem products.

AVX Multilayer Ceramic Chip Capacitors

C0G (NP0) Dielectric: • EIA class I ceramic materials • C0G (NP0) ceramics offer one of the most stable capacitor dielectrics available • Operating temperature range: -55°C ~ 125°C • Capacitance change with temperature is 0±30ppm/°C which is less than ±0.3% Δ C from -55°C ~ 125°C
X7R Dielectric: • X7R formulations are called "temperature stable" ceramics and fall into EIA class II materials • Its temperature variation of capacitance is within ±15% from -55°C ~ 125°C • Operating temperature range: -55°C ~ 125°C
X5R Dielectric: • General purpose dielectric for ceramic capacitors • EIA Class II dielectric • Temperature variation of capacitance is within ±15% from -55°C ~ 85°C • Operating temperature range: -55°C ~ 85°C
Y5V Dielectric: • Y5V formulations are for general purpose use in a limited temperature range • They have a wide temperature characteristic of +22%-82% capacitance change over the operating temperature range of -30°C ~ 85°C

Flexisafe Multilayer Ceramic Chip Capacitors

For Ultra Safety Critical Applications

AVX has developed a range of components specifically for safety critical applications. Utilizing the award-winning FLEXITERM™ layer in conjunction with the cascade (MLSC) design previously used for high voltage MLCC's, a range of ceramic capacitors is now available for customers who require components designed with an industry leading set of safety features. The FLEXITERM layer protects the component from any damage to the ceramic resulting from mechanical stress during PCB assembly or use with end customers. Board flexure type mechanical damage accounts for the majority of MLCC failures. The addition of the cascade (MLSC) structure protects the component from low insulation resistance failure resulting from other common causes for failure: thermal stress damage, repetitive strike ESD damage, and placement damage. With the inclusion of the cascade design structure to complement the FLEXITERM layer, the FLEXISAFE series of capacitors has unbeatable safety features.

Multilayer Ceramic Chip Capacitors with Soft Termination

With increased requirements from the automotive industry for additional component robustness, AVX recognized the need to produce a MLCC with enhanced mechanical strength. It was noted that many components may be subject to severe flexing and vibration when used in various under-the-bonnet automotive applications. To satisfy the requirement for enhanced mechanical strength, AVX had to find a way of ensuring electrical integrity is maintained whilst external forces are being applied to the component. It was found that the structure of the termination needed to be flexible and after much research and development, a "soft termination" was found. This soft termination is designed to enhance the mechanical flexure and temperature cycling performance of a standard ceramic capacitor with a X7R dielectric. The industry standard for flexure is 2mm minimum. With Soft Termination, AVX guarantees a minimum flexure of 5mm, without any internal cracks. Beyond 5mm, generally the component will open. The industry standard for temperature cycling is 1,000 cycles - AVX guarantees 3,000 cycles. As well as for automotive applications, the soft termination will provide design engineers with a satisfactory solution when designing PCBs which may be subject to high levels of board flexure.

Features:

- High mechanical performance able to withstand 5mm bend test guaranteed
- Open failure mode is apparent when products are overstressed by 5mm
- Increased temperature cycling performance for 3000 cycles and beyond
- Reduction in circuit board flex failures
- Base metal electrode system.

AVX LT Series Low Profile Multilayer Chip Capacitors

AVX introduces the LT series that is comprised of a range of low profile products in the X5R dielectric. X5R is a Class II dielectric with temperature variation of capacitance within ±15% from -55°C ~ 85°C. Offerings include 0402, 0603, 0805 and 1206 packages in compact, low-profile designs. The LT Series is ideal for decoupling and filtering applications where height clearance is limited.

Low Inductance Capacitors 0612/0508 IDC (InterDigitated Capacitors)

Very low equivalent series inductance, surface mountable, high speed decoupling capacitor. Measured inductances of 120pH (for 0612) and 95pH (for 0508) are the lowest in the FR4 mountable device family. Opposing current flow creates opposing magnetic fields. This causes the fields to cancel, effectively reducing the equivalent series inductance. Perfect solution for decoupling high speed microprocessors by allowing the engineers to lower the power delivery inductance of the entire system through the use of eight terminals. Overall reduction in decoupling components due to very low series inductance and high capacitance.

Tip and Ring Multilayer Ceramic Chip Capacitors

AVX Tip and Ring or ring detector multilayer ceramic chip capacitors are designed as a standard telecom filter to block -48 volts DC telephone line voltage and pass subscriber's AC signal pulse (16 to 25Hz, 70 to 90Vrms). The ringer capacitors replace large leaded film capacitors and are ideal for telecom/modern applications. These capacitors not only save valuable real estate on the board and reduce the weight of the overall product, but they all feature standard surface mounting capabilities that is so critical to new and compact designs.

Specifications:

- Operating Voltage Range: -55°C ~ 125°C • Dielectric Strength: 250% of rated voltage for 5 seconds at 50mA maximum current • Dissipation Factor: 2.5% maximum

Low Inductance Capacitors

The total inductance of a chip capacitor is determined both by its length to width ratio and by the mutual inductance coupling between its electrodes. Thus a 1210 chip size has a lower inductance than a 1206 chip. This design improvement is the basis of AVX's Low Inductance Chip Capacitors (LICC), where the electrodes are terminated on the long side of the chip instead of the short side. The 1206 becomes a 0612, in the same manner, a 0805 becomes a 0508, a 0603 becomes a 0306. This results in a reduction in inductance for the 1nH range found in normal chip capacitors to less tan 0.2nH for LICC's. Their low profile is also ideal for surface mounting (both on the PCB and on the IC package) or inside cavity mounting on the IC itself.

Characteristics: • Operating Temperature Range: X7R: -55°C ~ 125°C, X5R: -55°C ~ 85°C • Temperature Coefficient: ±15% (0VDC) • Dissipation Factor: 10V = 5.0% maximum; 16V = 3.5% maximum; 25V = 3.0% maximum • Insulation Resistance (@ 25°C RVDC): 100,000MΩ minimum or 1,000MΩ per µF whichever is less.

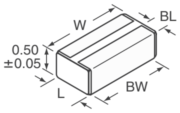
Low Inductance LGA Capacitors



AVX has introduced a revolutionary capacitor for low inductance applications. Low inductance LGA (land grid array) capacitors have virtually the equivalent high frequency performance of 8-terminal IDC's (Inter-Digitated Capacitors) but are built in a simplified 2-terminal package.
This provides for lower manufacturing cost and easier handling and design. LGA's are ideal for decoupling in semiconductor package-level and board-level applications.

† Tip and Ring Chip

KEMET CHARGED. Multilayer Ceramic Chip Capacitors

RoHS COMPLIANT

KEMET multilayer ceramic chip capacitors are produced in plants designed specifically for chip capacitor manufacture. The process features a high degree of mechanization as well as precise controls over raw materials and process conditions.

Manufacturing is supplemented by extensive technology, Engineering and Quality Assurance programs. Standard end terminations use a nickel barrier layer and a tin overplate to provide excellent solderability.

The 250VDC or Tip & Ring MLCC capacitors are designed and rated for telecommunication ringer circuits where the capacitor is used to block -48 to -52VDC of line voltage and pass a 16~25Hz AC signal pulse of 70~90Vrms.

GJM Series: The Murata GJM Series is a high Q, ultra small capacitor series for high frequency applications in the 500MHz ~ 10GHz range, suitable for VCO and PA Module applications. The GJM Series of capacitors are made with copper electrodes for low ESR and low power consumption due to the high Q (low loss) performance. This series is offered in EIA sizes 0201 and 0402. They are lead free/RoHS compliant. **Features:** • Better Q and low ESR at VHF, UHF, and microwave frequencies • Copper inner electrode • Low power consumption, yield ratio improvement due to the better Q or lower ESR • VCO or PA module applications **Operating Temperature Range:** • C0G (NP0): -55°C ~ 125°C

Multilayer Ceramic Chip Capacitors

GRM Series:

The Murata GRM series is a complete line of ceramic chip capacitors with a wide range of voltages and sizes. These capacitors have temperature characteristics ranging from C0G to Z5U. GRM series is offered with a Nickel (Ni) barrier termination plated with Tin (Sn), highly resistant to migration. Stringent dimensional tolerances allow highly reliable, high-speed automatic chip placement on PCBs.

GRM Hi-Cap Series:

The Murata Hi-Cap, Ta replacement product lineup is available with capacitance of 1µF and larger, in voltages of 6.3V ~ 50V. Why use ceramic chips over Ta and Al capacitors? Ceramic chips offer better reliability, electrical performance, no polarity, and allow design engineers to downsize designs with various package options. This line of high volumetric multilayer capacitance ceramic chip capacitors (MLCC) has excellent high frequency noise absorption performance compared to Ta and Al caps. For bypass/decoupling applications, MLCC is equivalent to 1/2 to 1/5 the capacitance value of a Ta capacitor because impedance (ESR) of MLCC is lower at higher frequencies (above 100kHz.) Consider Murata Hi-Cap as your Ta capacitor replacement.

Operating Temperature Range:

- C0G (NP0): -55°C ~ 125°C • U2J: 25°C ~ 85°C • X7R: -55°C ~ 125°C • X6S: -55°C ~ 105°C • X5R: -55°C ~ 85°C • Y5V: -30°C ~ 85°C • Z5U: 10°C ~ 85°C

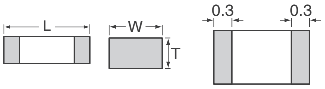
Monolithic Ceramic Chip Capacitors Safety Standard



General Features: • New monolithic structure for small, high capacitance capable of operating at high voltage levels. • 125°C guaranteed • Only for reflow soldering

GB Series: Features: • Chip monolithic ceramic capacitor (certified as conforming to safety standards) for AC lines. • Compared to lead type capacitors, this new capacitor is greatly downsized and low-profiled to 1/10 or less in volume, and 1/4 or less in height. **Applications:** • Ideal for use as X capacitor for various switching power supplies

GD Series: Features: • Available for equipment based on IEC/EN60950 and UL1950 • The low-profile type (thickness: 1.5mm max.) is available for use on thinner type equipment. **Applications:** • For use on line filters and couplings for DAA modems without transformers • Line filters for information equipment

GF Series: Features: • Available for equipment based on IEC/EN60950 and UL1950. The GA352/355 types are available for equipment based on IEC/EN60065, UL1492, and UL6500 • The low-profile type (thickness: 1.5mm max.) is available for use on thinner type equipment. **Applications:** • For use on line filters and couplings for DAA modems without transformers • Use on line filters for information equipment • Use as Y capacitor or X capacitor for various switching power supplies (GA352/355 types only)

TAIYO YUDEN Multilayer Ceramic Chip Capacitors

Features: The use of Nickel (Ni) as material for both the internal and external electrodes improves the solderability and heat resistance characteristics. This almost completely eliminates migration and raises the level of reliability significantly. Low equivalent series resistance (ESR) provides excellent noise absorption characteristics. Compared to tantalum or aluminum electrolytic capacitors, these ceramic capacitors offer a number of excellent features, including: • Higher permissible ripple current values • Smaller case sizes relative to rated voltage • Improved reliability due to higher insulation resistance and breakdown voltage

Operating Temperature Range: • C0G: -55° ~ 125°C • X7R: -55° ~ 125°C • X5R: -55° ~ 85°C • X5S: -55° ~ 85°C • Y5V: -30° ~ 85°C

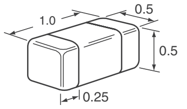
TAIYO YUDEN

High Frequency Multilayer Ceramic Chip Capacitors



Features: Q-values in the high-frequency range (1 GHz+) are excellent compared to other types of multilayer capacitors. The 1005 (0402) case size is designed for high density mounting and weight reduction in various applications.

Operating Temperature Range: -55 ~ 125°C

Applications: Suitable for those high-frequency applications in which a capacitor with both a high Q-value and small size is required, such as portable communications and other wireless applications: VCO, TCXO, etc. Adjustment of characteristics in high-frequency circuits.

Super Low Distortion Multilayer Ceramic Capacitors (CFCAP)

Features: Newly developed dielectric material and the use of nickel for internal electrodes provide excellent temperature characteristics with high capacitance, small case size, and low cost. Low distortion and low shock noise make these capacitors well-suited for use in analog or digital mobile devices. Excellent heat-resistance, high break-down voltage, and mechanical strength make these capacitors well suited for replacing film capacitors.

Applications: • Signal line for AV products • Analog signal coupling applications • PLL circuit of mobile phones • Good temperature characteristics for time-constant circuits, oscillation circuits and filters

Specifications: • Operating Temperature: -55°C ~ 125°C

NEW! X2Y® Series Surface Mount Ceramic EMI Filter Capacitors

RoHS COMPLIANT Pb

Features: • Broadband Filtering and Decoupling: Effective up to 10 GHz and frequencies beyond • Ultra Low ESL: Noise cancellation makes ESL reduce from nanohenry to picohenry levels • Bypass: Unlike feedthrough capacitors, X2Y is in bypass, so no DC current limitations • Matched Y-caps: Two tightly matched line to ground capacitors in one device • Superior Balance: Temperature and voltage variations balanced of two Y-caps • Aging Reliability: Aging effects are equal on two Y-caps

Benefits: • Fewer Component in Filtering: Can replace multiple inductors and/or capacitors • Superior Performance in Filtering: Can eliminate both differential and common mode noises • Fewer Component in Decoupling: Up to 1:7 replacement of MLCC in power delivering system bypass networks • Superior Performance in Decoupling: Large or small, X2Y components exhibit ultra low ESL • Total Cost Savings: Assembly cost savings through reduced component count and placement costs • Board Level Design Advantages: Dramatically reduces via drills, which blocks routing

Applications: • EMI filtering on DC motors • Filtered connectors (airbag connectors, RJ-45 connectors) • High speed data-line filtering • Decoupling of supply-lines in high speed digital circuits • Broadband filtering • Amplifier decoupling and EMI suppression • IC Decoupling, on-package, on PCB • DC power line filtering • Data line filtering • EMI suppression for DC motors • Sensors • Audio

BC COMPONENTS

Surface Mount Multilayer Ceramic Chip Capacitors

Features:
- High capacitance per unit volume
- For high frequency applications
- Ni-barrier terminations

Applications:
- Consumer electronics
- Telecommunications
- Automotive
- Data processing

The capacitor consists of a rectangular block of ceramic dielectric in which a number of interleaved metal electrodes are contained.

This structure gives rise to a high capacitance per unit volume.

The inner electrodes are connected to the two terminations by silver or copper dipping with a barrier layer of plated nickel and finally covered with a layer of plated tin (NiSn).

CDE CORNELL DUBILIER

MC Series Multilayer SMT Mica RF Capacitors

Type MC capacitors are the answer for high frequency public-service and military radio communication, flight radio and cable television. The natural mica dielectric retains its high-Q to many megahertz, so higher frequency applications are limited by the circuit inductance-not the type MC capacitor. FR4 compatibility and natural robustness offer freedom from the thermal cracking found with other RF capacitors.

FEATURES:
• Ultra stable-no change in capacitance with frequency, voltage or temperature • Free from thermal cracking • High RF Current dV/dt 20,000 V/us • Very high Q • Very low ESL and ESR • Wave Solderable

SPECIFICATIONS:
Temperature Range: -55°C ~ 125°C with no voltage derating

APPLICATIONS:
• MRI RF coils • RF Instruments and Communications • 2-way mobile radio • Tuned circuits • CATV • Plasma generators for medical and IC manufacturing

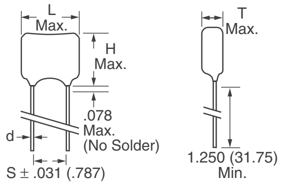
CDE CORNELL DUBILIER

Multilayer RF MICA Capacitors — Radial Lead



Cornell Dubilier mica capacitors are made of pure India Ruby muscovite mica. It is among the most inert and stable materials in the universe. When used as the insulator (dielectric) in a capacitor, the result is an electronic component with the ultimate in stability and reliability.

The capacitance change from zero to full rated operating voltage is generally less than ±0.1%. The series inductance of these capacitors is as little as eight nanohenrys (nH). The stability characteristics also apply to frequency which is why mica capacitors are so useful throughout the RF frequency range.

Mica capacitors are so efficient that less than 0.05% of the applied volt-amperes is lost as heat. Dipped silver mica capacitors such as the Standard Types are manufactured by applying pure silver to ultra-thin mica plates. The plates are stacked and secured by brass clips with copper-clad steel leads welded to each clip. The extra mass of the metal acts as a heat sink and enables these capacitors to absorb voltage transients up to 100,000 volts per microsecond.

RoHS COMPLIANT

Using the conventional properties of Thin Film Resistors, SSM has successfully achieved the environmental, resistance stability and sustained durability issues that are encountered while operating at higher temperatures. We call this "RG" and "RGH" Series (Resistor Great). Higher reliability parts are indispensable in the Automotive, Measurement and Medical Industries as quality requirements increase. Susumu provides a solution with the RG and RGH Series thin film chip resistors. The RG and RGH series provides excellent TCR, Low Current Noise, and Linearity specifications needed in high frequency applications. Tight tolerance allows for circuit simplification and the elimination of trim pots which leads to cost savings.

SPECIFICATIONS: Performance: Inorganic protective coating assures high reliability, durability and protection against heat and moisture.
Operating Temperature: -55°C ~ 155°C (RG 100% Power at 85°C, RGH 100% Power at 70°C)
Thermal Derating: The RG series is able to dissipate 100% of rated power at 85°C, RGH Series is 70°C. For applications operating above 85°C, the user must derate the resistors in accordance with the derating curve listed.
Applications: Suitable for automotive, measurement devices and any application where accuracy and reliability are required.

0201 / 0402 / 0603 / 0805 SMD .1% and .5% Thin Film Chip Resistors – High Precision RR Series - 1/10, 1/16, 1/20 Watt

Susumu has been manufacturing thin film resistors since 1986 and is the primary thin film supplier in the world. Susumu's Number One status in thin film resistors can be attributed to the sales of the RR series thin film chip resistors. The RR series offers excellent TCR tolerances, Linearity specifications and Low Current Noise. These specifications contribute to circuit simplification, and cost savings as they eliminate the need for trimmer pots in the circuit for adjustment.

0402 / 0805 / 0815 / 0830 / 1206 / 2512 SMD 1%, 2% and 5% Thin Film Chip Resistors Low Resistance RL, RLL, RLS and PRL Series — 1/8, 1/4, 1/2, 1 and 2 Watt

Susumu's RL and PRL series current sensing resistors provide excellent heat dissipation which allows higher power handling in smaller package sizes. Their patented structure will not create "hot spots" and evenly distribute heat across the total surface area of the resistor.

A specially designed construction assures small dimensions and repressed surface temperature increase due to heat radiation and thermal conduction. This construction also minimizes the thermal effects on peripheral areas. Patent 2963671.

Surface Mount Thin Film Chip Resistors

RoHS COMPLIANT

Description:
The resistors are constructed out of a high-grade ceramic body. Internal metal electrodes are added at each end and connected by a resistive material. The composition of the resistive material is adjusted to give the approximate required resistance and laser cutting of this resistive layer that achieves tolerance trims the value. The resistive layer is covered with a protective coat and printed with the resistance value. Finally, the two external terminations (matte tin) are added.

YAGEO Surface Mount 1% & 5% Thick Film Chip Resistors

Description:
The resistors are constructed on a high grade ceramic body (aluminum oxide). Internal metal electrodes are added at each end and connected by a resistive paste which is applied to the top surface of the substrate. The composition of the paste is adjusted to give the approximate resistance required and the value is trimmed to within tolerance, by laser cutting of the resistive layer. The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For ease of soldering the outer layer of these end terminations is a lead/tin alloy. End terminations on RoHS Compliant parts are pure tin.

Rated Continuous Working Voltage (RCWV):
The rated voltage at each resistance should be calculated from the following equation:
$RCWV=\sqrt{P \times R}$
RCWV(V):P(W):R(Ω)
Maximum Overload Voltage = RCWV x 2.5

Panasonic 5 % Metal Oxide Film Resistors

Now Available In Tape and Reel

Matsushita fixed metal oxide film resistors feature small sized dimensions and have higher power rating at the same size as the conventional type.

Features:
Flame retardancy of the exclusively formulated inorganic insulative material exhibits an equivalent performance requirements of UL-94 (VE-O) and when operated at a potential less than 16 times RCWV, Matsushita metal (oxide) film resistors never flame nor arc.

The coating and markings resist normal washing of solvents, such as Freon (TE, TMC, TF), trichloroethane.

YAGEO 5% Metal Oxide Film Resistors

RSF Series

These Metal Oxide Resistors offer lower cost alternatives to Carbon Composition Resistors and General Purpose Metal Films. They can replace many low power General Purpose wirewound applications. These Metal Oxides meet overload tests in accordance with UL specification #1412 without producing a fire hazard. They withstand solvents in accordance with article Mil-Std-202E without producing mechanical or electrical damage.

Features: High surge/overload capability. Non-inductive design. Coating and marking resist Trichlorethelyne, Freon, and other cleaning agents. The RFS Series resistors are coated with layers of gray flame-proof lacquer.

High quality ceramic cores are used with a coating of either vitreous enamel or silicone to provide heat sink for short term overloads and maximum dissipation.

Specifications: • **Dielectric Withstanding Voltage:** Measured from terminals to brackets, 1000VAC • **Overload:** 10 X rated power for 5 seconds • **Tolerance:** ±10% • Wattage is based on 25°C free air rating.

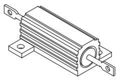
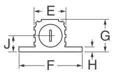
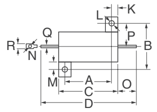
Aluminum Housed Chassis Mount Resistors – 5, 10, 25, 50 Watt, 1% (Precision Power Wirewound)







HEI's high-power aluminum housed resistors use centerless ground ceramic cores for uniform heat distribution. Molded in a special high temperature material and mounted in an extruded aluminum finned housing, these designs provide maximum power dissipation and reliability. They have tinned copperweld leads for solderability and meet or exceed MIL-R-18546, including "N" characteristic, and MIL-R-39009. **Specifications:** • Power Rating: Based on full power operation at 25°C, and maximum hotspot 275°C. • Mounting on proper heat sink as follows: For 5 and 10 Watt – use 4" x 6" x 2" x .040" (101.60 x 152.40 x 50.80 x 1.02mm) aluminum chassis; For 25 and 50 Watt – use 5" x 7" x 2" x .040" (127.00 x 177.80 x 50.80 x 1.02mm) aluminum chassis.

High Voltage Resistor — HVR
A multi layer metal film is deposited on a high-grade ceramic body. After a helical groove has been cut in the resistive layer, tinned electrolytic copper wires are welded to the end caps. The resistors are coated with a blue lacquer, which provides electrical, mechanical and climactic protection. The encapsulation is resistant to all cleaning solvents in accordance with "MIL-STD 202, method 215" and "IEC 60068-2-45". **Features:**
- Metal film technology
- High pulse loading capability

Specificatons:
- Limiting Voltage: 1600VDC (HVR25), 3500VDC (HVR37), 10,000VDC (HVR68)
- Temperature Coefficient: ± 250ppm/°C

The resistor element is a resistive wire which is wound in a single layer on a ceramic rod. Metal caps are pressed over the ends of the rod. The ends of the resistance wire and the leads are connected to the caps by welding. Tinned copper-clad iron leads with poor heat conductivity are employed permitting the use of relatively short leads to obtain stable mounting without overheating the solder joint. The resistor is coated with a green silicon cement which is not resistant to aggressive fluxes. The coating is non-flammable, will not drip even at high overloads and is resistant to most commonly used cleaning solvents, in accordance with MIL-STD-202E, method 215 and IEC 60068-2-45.

Little Demon® Carbon Composition Molded Resistors

OD Series, OF Series and OA Series

Little Demons are small, reliable carbon composition resistors with exceptional strength. They are made tough by a molding process that combines the leads, insulation and resistive element into an integrated unit. Along with their small size, Little Demons perform with low noise, dissipate heat rapidly and offer high temperature stability. Color codes are readable even after prolonged use, thanks to a very durable coating that resists abrasions and chipping normally associated with automatic insertion equipment.

Features: • Molded insulation for high dielectric strength • Rugged construction • High surge capabilities • Comparable to "Mil" RC07, RC20, and RC32 types

Material: • Terminals: Solder-coated copper lead • Body: Molded Phenolic

Electrical: • Derating: Linearly from 100% @ 70°C ~ 0% @ 130°C

Features:
- Ohmite's new flat core winding technology allows for wirewound heat sinkable resistors affording a very low profile and superior thermal transfer characteristics when compared to conventional aluminum housed wirewound resistors. • Close mounting of heat sensitive components is possible due to only a slight rise of the temperature on the aluminum profile. • No heat sink compound is required because of large mounting surface.

Specifications:
- Dielectric Strength: 2500VAC peak • Working Voltage: 1200VAC • Insulation: Silicone Rubber & Mica. The Silicone is UL-recognized (UL 94 HB) to a working temperature of 220°C. Temperatures of up to 300°C can be endured for shorter periods, however this may cause an expansion of the silicone rubber with a possibility of reducing the dielectric strength.

Note: *Please see data sheet for heat sink recommendations.*

OHMITE 89 Type - Aluminum Housed Axial Lead Wirewound Resistors

The 89 Type are high performance axial-lead-type resistors. They are better suited to withstand vibration, shock and harsh environmental conditions than standard axial-lead resistors. The 89 Type are aluminum housed to maintain high stability during operation and to permit secure mounting to chassis surfaces. The housing also provides heat-sinking capabilities. The 89 Type resistors meet or exceed MIL-R-18546 specifications.

250 Series Vitreous Enamel Power Resistors — 30, 40 and 55 Watt

When limited space is a consideration, choose Ohmite's "thin" stackable 250 Type resistors. These oval-shaped ceramic-core resistors feature a low profile to permit installation in spaces with minimal height. They are also equipped with integral mounting brackets so they can be fastened to a chassis and stacked in locations with limited surface area.

Material:
- **Coating:** Lead free vitreous enamel
- **Core:** Ceramic
- **Derating:** Linearly from 100% @ 15°C ~ 0% @ 350°C

Electrical:
- **Tolerance:** ±5%
- **Overload:** 5 times rated wattage for 5 seconds
- **Dielectric withstanding voltage**: 1000 VAC (measured from lug to mounting bracket)

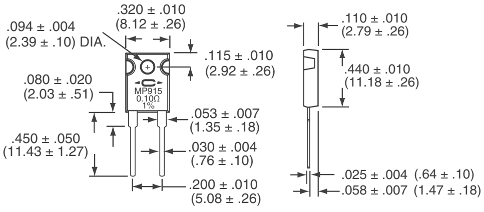
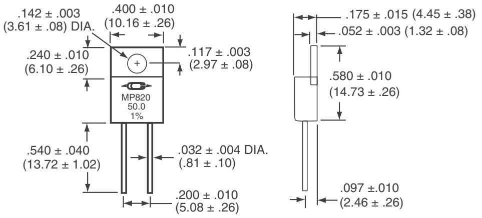
Dimensions Inches(mm)

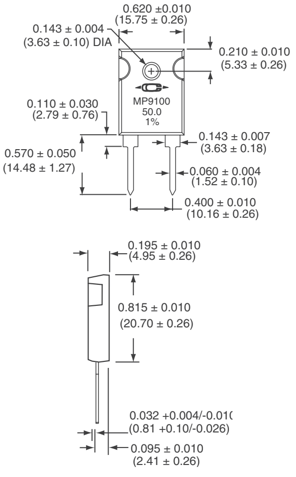
MP915 — TO-126 Style, Case A



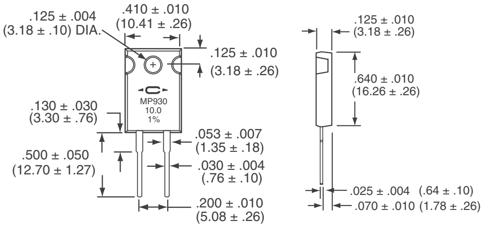
MP820 and MP821 — TO-220 Metal Tab Style, Case B



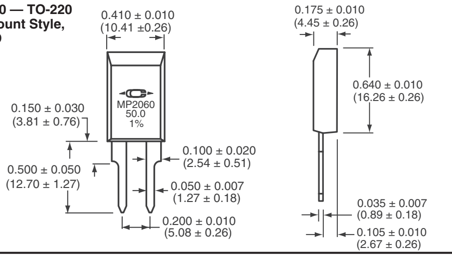
MP9100 — TO-247 Style, Case E



MP916, MP925 and MP930 — TO-220 Style, Case C



MP2060 — TO-220 Clip Mount Style, Case D



Power Ratings are based on 25°C case temperature. The case temperature is used to establish the maximum applied power, see Derating Curve. The case temperature measurement is made with a thermocouple contacting the bottom mounting surface of the package (center of heat dissipating surface), with the device mounted on the heat sink with thermal grease or thermal interface material.

Mounting Note: Mount on a smooth, clean, and flat heat sink surface with a thermal interface material such as thermal grease. The entire heat dissipating surface area must be in contact with the heat sink.

Screw Mounting: Mount with a compression washer (Belleville) that provides a force of 150 ~ 300 pounds. The maximum mounting torque to avoid damage to the package is 6 in-lbs (TO-126), 8 in-lbs (TO-220 and TO-247).

Clip Mounting: Recommended Clip Force is 8 ~ 30 pounds applied to the center of the package. The clip should be smooth to avoid any point concentrations of pressure. ***For additional information see the application notes online @ www.caddock.com***

YAGEO SMT Chip Resistor Arrays

Series TC164, YC122, YC124, YC164, YC248, YC324 and YC358

The resistors are constructed out of a high-grade ceramic body. Internal metal electrodes are added at each end and connected by resistive paste. The composition of the paste is adjusted to achieve an approximate resistance value, then the resistive layer is laser trimmed to the exact tolerance value. The resistive layer is covered with a protective coat.

SPECIFICATIONS: • Resistance Tolerance: J: ±5% • Temperature Coefficient: ±200 ppm/°C • Operating Temperature Range: -55°C ~ 125°C • Maximum Working Voltage: 50V (YC324 Series: 200V) • Maximum Overload Voltage: 100V (YC324 Series: 500V) • Short Time Overload: 2.5 x RCWV for 5 seconds at 25°C • Rated continuous working voltage (RCWV) shall be determined from RCWV = $\sqrt{(P \times R)}$ or maximum RCWV listed, whichever is less.

CTS CLEARONE™

BGA Terminators and Bias Networks

• Ceramic BGA Packaging • High density form factor • Designed for termination of parallel data busses • Designed for high frequency data transmission • Virtually eliminates parasitic capacitance and inductance • Ultra low channel capacitance • Flexible form factor; 1mm and 1.27mm pitch • *All dimensions in mm*

Now including Top Probe-able Devices†

The use of ball grid array (BGA) devices during the development phase of a project can represent some unique challenges in terms of circuit probing and device removal should device parameters need to be altered. CTS introduced the Top Probe-able devices to provide easy access to the internal circuitry of the BGA device without probing of the solder spheres, and eliminate the space consumed by test points on the circuit board. For parts available in Top Probe Configuration see Digi-Key parts marked with †.

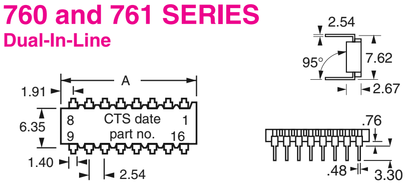
- High reliability resistors • Low-profile construction • .100" lead spacing • Alumina substrate

760 and 761 SERIES

Dual-In-Line

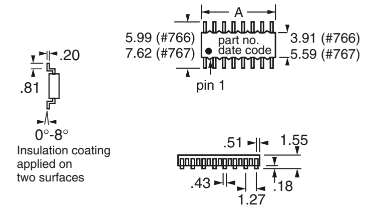


Requires 30% less board space than molded networks of the same power rating.

Specifications:
- **Resistance Tolerance:** Standard: ±2% • **Maximum Operating Voltage:** 50V not to exceed rated power • **Temperature Coefficient:** 100Ω through 1MΩ ±100PPM/°C typical, Below 100Ω ±200PPM/°C typical • **Operating Temperature Range:** –55°C ~ 125°C • **Dielectric Strength**: 100V

766 and 767 SERIES

Dual-In-Line Surface Mount

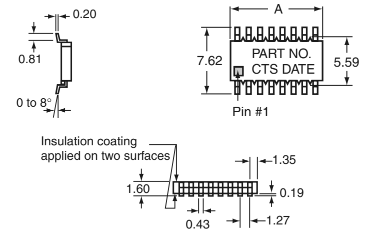


Thin cover coating generates higher power ratings. Thin proprietary cover protection keeps resistors near the surface, allowing the alumina substrate to act as a heat sink. That means higher power ratings than molded networks.

Specifications:
- **Resistance Tolerance:** ±2%. • **Temperature Coefficient:** ±100PPM/°C typical

768 SERIES

Dual-In-Line Surface Mount



Medium body, small outline products. Low profile — board to network clearance of 0.075"/0.005".

Specifications:
- **Resistance Tolerance:** Standard: ±2% or 0.5Ω (whichever is greater) • **Maximum Operating Voltage:** 50V not to exceed rated power • **Temperature Coefficient:** Standard: 100Ω to 1MΩ ±100PPM/°C typical, 10Ω to 99Ω ±200PPM/°C typical • **Operating Temperature Range:** -55°C ~ 125°C • **Dielectric Strength:** 100VAC

Features: Anodized precision machined aluminum exterior. Accommodates potentiometer shaft - 1/4" (6.35mm) with 3/8" x 32-NEF-2A bushing. Requires only one square inch of panel space.

400 Series: 1" (25.40mm) **10 Turn Calibration**. This world class turns-counting dial is designed for multi-turn potentiometers up to ten turns or other rotary devices. The knob/scale attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel, therefore, accurate readings with a ratio of 1000 to 1 for ten turns are provided with no backlash or reading error. Available with or without locking mechanism.

500 Series: 1" (25.40mm) **1 Turn Calibrated scale.**

600 Series: 1" (25.40mm) **1 Turn Uncalibrated dial.**

3400 Series: 7/8" (22.23mm) **20 Turn Calibration.** Calibrated dial designed for multi-turn potentiometers up to twenty turns or other rotary devices. The turns counting digit appears in the window as the dial is rotated. Mounting bracket plate is installed between panel and panel nut, with the dial mounting directly to the potentiometer shaft.
